

This update makes the Aged Debtors report more trustworthy throughout the working day. A freshness indicator now shows exactly when the figures were last read from Sage, and the ledger syncs at 08:00, 11:00, 14:00 and 17:00 — so the debtors book stays current without waiting for the overnight run.

Improvements

IMPROVED

■ Aged Debtors shows data freshness and syncs during the day

The Aged Debtors screen now always displays when the open-item ledger was last read from Sage, in a colour-coded label below the summary tiles — green when current (under 8 hours old), amber as it ages, and red when significantly stale. When the data is more than 8 hours old, the label also notes that invoices and receipts posted since are not yet in the figures, so the totals are never silently mistaken for a live balance. The ledger now also syncs at 08:00, 11:00, 14:00 and 17:00 in addition to the overnight run, keeping the debtors book current throughout the working day.
