

This update introduces the Invoice Profit report — a new view of your trading performance that shows the cost price, selling price, and gross profit on every invoice, grouped by day, week, or month. Drill into any period to see the contributing invoices line by line, export the result as a PDF, and — at head office — compare profitability across branches in a single view. Every figure is drawn from, and reconciles to, Sage.

New Features

NEW

■ Invoice Profit report

A new report shows the cost price, selling price, and gross profit for every invoice, grouped into daily, weekly, or monthly periods. Spot your most and least profitable trading periods at a glance, and drill into any row to see the individual invoices behind the figures.

■ Invoice line drill-down and export

Open any period in the Invoice Profit report to see the individual invoices behind the figure. Export the full date range as a formatted PDF summary (month, week, and day totals) for filing or sharing; detailed per-invoice data is available as an Excel workbook.

■ Invoice Profit at head office — branch comparison

Head-office users can view Invoice Profit across all branches in one screen, with Day, Week, Month, and Year totals and a branch drill-down to compare profitability site by site.

Improvements

IMPROVED

■ Profit summary strip and filters

The Invoice Profit report opens with a summary strip showing total cost, revenue, and gross profit for the period in view. On a branch, a date-range picker and profit filters let you narrow the figures, with the selection encoded in the page link for bookmarking and sharing. At head office, a period selector switches between Day, Week, Month, and Year groupings, and a branch selector narrows to a single site.

■ Data-freshness indicator

The report shows when its data was last synced from Sage, with a clear warning when figures may be out of date, so you always know how current the numbers are.
