

This update focuses on the Inventory Stock Card. You can now search for items using a fast, searchable picker instead of scrolling through a full list, print any stock card on a branded letterhead sheet, and export a stock card to CSV for use in a spreadsheet. A fix ensures that search errors in the item picker are surfaced clearly and that stale results no longer flash on screen while a new search loads.

New Features

NEW

■ Searchable item picker on the Stock Card

The item selector on the Stock Card is now a fast, searchable combobox — type a few characters to jump straight to the item you need instead of scrolling through the full list.

■ Print the stock card on your letterhead

Any stock card can now be sent to the printer as a formatted, letterhead-branded sheet, ready to file or hand to a supplier.

■ Export a stock card to CSV

Download the stock card for any item as a CSV file, ready to open in a spreadsheet or share with a colleague.

Fixes

FIXED

■ Item picker shows search errors clearly; no stale-result flash

If the item search encounters a problem, the error is now shown on screen rather than failing silently. The picker also no longer briefly shows old results while a new search is loading.
