

This update makes the Aged Debtors report more trustworthy throughout the working day. A freshness indicator now shows exactly when the figures were last read from Sage, and the ledger syncs at 08:00, 11:00, 14:00 and 17:00 — so the debtors book stays current without waiting for the overnight run.

Improvements

IMPROVED

■ Aged Debtors shows data freshness and syncs during the day

The Aged Debtors screen now displays a colour-coded freshness label below the summary tiles showing exactly when the open-item ledger was last read from Sage — green when current (under 8 hours), amber after that, and red if the data is significantly stale. A note makes clear that amounts posted since the last read are not yet in the figures, so the totals are never mistaken for live balances. The ledger now also syncs at 08:00, 11:00, 14:00 and 17:00 in addition to the overnight run, reducing the gap between Sage and the screen to a matter of hours during the working day.
