

A big update: a new Reporting Dashboard and proactive Insights feed, a new Creditors module, reorder planning and richer inventory & sales reporting, downloadable reports, faster navigation — plus improved sales-commission tracking and a range of refinements and fixes across the application.

New Features

NEW

■ Creditors module

A new area for managing supplier accounts. View outstanding balances at a glance, search individual creditors, and drill into payment history. Balances sync automatically each night, so the figures you see are always current.

■ Inventory & sales trends

New reporting that compares inventory and sales year over year, highlights your top sellers by season, and surfaces slow-moving stock — making it easier to spot patterns and plan ahead.

■ Sales commission tracking

Commission is now calculated on paid sales, with a clear per-rep breakdown of any unpaid invoices. Invoices that remain unpaid across periods are reconciled automatically, keeping commission figures accurate.

■ Reporting dashboard

A new at-a-glance home for reporting: headline figures and a summary card for each report, plus a system-health strip that shows whether your Sage data is current. Open any full report in one click.

■ Insights — automatic alerts

The app now surfaces what needs attention on its own — falling sales, customers buying less, dead stock building up, and large debtor exposure — as a ranked feed. Administrators can add their own rules (e.g. "alert me if revenue drops more than 10%").

■ Reorder planning

See exactly what to order and when: items at or below their reorder point, grouped by supplier, with an exportable purchase sheet. Click any item to view its sales trend and seasonality.

■ Download reports as PDF or Excel

Aged Debtors and Sales Rep Exposure can now be downloaded as a polished PDF or an Excel workbook that matches your on-screen filters — easy to share or file.

Improvements

IMPROVED

■ Clearer navigation

Menus have been reorganised into logical groups so the report and tool you need is easier to find.

- **More flexible tables**

Summary tables now support resizable columns and tidier layouts, with more of the page used for your data.

- **Configurable data sync**

A new settings area lets administrators fine-tune how supplier data is retrieved and how much history is loaded.

- **Instant navigation & notifications**

Press Ctrl/Cmd-K to jump to any page or report instantly, and a new notifications bell flags anything that needs attention from anywhere in the app. The sidebar has also been tidied up.

- **Shareable & saved report views**

Report filters are now kept in the page link, so a filtered view can be bookmarked or shared — and you can save your favourite views and jump back to them in one click.

- **Faster, smoother screens**

Reports and dashboards load noticeably faster, show tidy loading placeholders instead of blank screens, and offer a one-click retry if something fails to load. Helpful tooltips have been added throughout the new areas.

Fixes

FIXED

- **Accurate timestamps**

Recorded dates and times now consistently reflect local time across the application.

- **Stability improvements**

Resolved several issues that could cause errors when switching between views, and corrected balance and payment figures in a number of reports.

- **Commission report accuracy**

The printed commission report now includes dedicated Unpaid Invoices and Clawback pages. Clawback no longer treats returns / credit notes as a credit to the rep, and the "commission at risk" total now adds up correctly.
