

This update spans mid-May to early June 2026 and represents a substantial expansion of the platform: two new financial modules (Creditors and Sales Commission), a Sage-faithful aging system for both debtors and creditors, new inventory and sales analytics, a reporting dashboard with a proactive insights feed, and a broad set of usability, performance and accuracy improvements. Every figure is drawn from, and reconciles to, Sage.

## New Modules & Features

NEW

### ■ Creditors module

A complete new area for managing supplier accounts, fed from Sage and refreshed automatically each night so the figures are always current.

- Creditor Summary: outstanding balance per vendor with header totals and resizable columns.
- Creditor Search: drill into an individual supplier and its full payment history.
- Nightly Sage sync built on verified Sage column mappings (no guesswork), with a correct payment filter.
- A Settings tab to fine-tune the Sage query and how much history is loaded.
- A default filter that hides never-paid and zero-balance vendors, so the list shows who you actually trade with.
- Its own access permission and sidebar group.

### ■ Aged Creditors report

A new report that ages every open supplier document the way Sage's Aged Payables trial balance does, rather than dropping a whole balance into one period.

- Sage monthly periods: Current, 1-30, 31-60, 61-90 and Over 90 days, aged by due date.
- Each document is placed individually, so a vendor correctly spans several periods.
- Reconciles to the live Sage open items, and downloads as a polished PDF or Excel workbook.
- Available consolidated and per branch at head office.

### ■ Aged Debtors, rebuilt on the Sage open-item ledger

The customer aging report was rebuilt on a new open-item ledger synced from Sage, so each invoice, credit note and debit note is aged individually instead of approximating from a single balance.

- Sage weekly periods: Current, 1-7, 8-14, 15-21 and Over 21 days, by document date.
- Customers in a national account roll up under the parent and inherit its sales rep and type.
- Reconciles to the live Sage open items rather than a balance that could drift.

### ■ Monthly Sales Figures report

A new month-by-month view of posted invoices, credit notes and debit notes with VAT shown separately, matching your existing Sage 'Sales Figures' report to the cent.

- Ex-VAT, VAT and Inclusive columns for each document type, plus a Net line and grand totals.
- The current month is highlighted; exports to CSV and prints cleanly.
- At head office it can be viewed per branch and consolidated across the group.

## ■ Sales Commission reporting

Monthly sales-commission reports that mirror your existing spreadsheet, drawn directly from Sage, with automatic archiving and per-rep accuracy.

- Sage-native queries that reproduce the operator spreadsheet (Sweets / Cig+Tob splits).
- Commission calculated on paid sales, with a clear per-rep breakdown of unpaid invoices.
- A clawback workflow for invoices unpaid across periods, floored at zero so a return never credits the rep.
- Automatic month-end archiving, bundled per site as PDFs and pushed to head office.
- A printed report with dedicated Unpaid Invoices and Clawback pages, and an admin query-override panel.

## ■ Inventory & sales analytics (Trends)

New reporting that compares inventory and sales year over year, highlights top sellers by season, and surfaces slow-moving stock, for a single site or the whole group.

- Customer and Inventory views, with Mix and Movement sub-views.
- Top ten items per South African season, with commodity codes shown as names (Sweets / Cigarettes / Tobacco / Mixed).
- Dead-stock highlighting restricted to stock currently held, with a site filter.
- Inventory history extended to three calendar years for year-over-year comparison.

## ■ Reorder planning

See exactly what to order and when: items at or below their reorder point, grouped by supplier, with an exportable purchase sheet.

- Click any item to view its sales trend and seasonality before ordering.

## ■ Inventory Movement & Stock Receipt Expiry

Two new operational tools for stock control.

- Inventory Movement shows how quickly stock is selling, flags dead stock, and rolls figures up across sites.
- Stock Receipt Expiry captures expiry dates against stock as it is received, kept in step with your Sage purchase orders (including reversed lines), to stay ahead of short-dated stock.

## ■ Reporting Dashboard & Insights

A new at-a-glance home for reporting, plus a feed that surfaces what needs attention on its own.

- Headline figures and a summary card per report, with a strip showing whether your Sage data is current.
- A ranked Insights feed: falling sales, customers buying less, dead stock building up, and large debtor exposure.
- Administrators can add their own no-code rules (for example, alert if revenue drops more than 10%).
- Summary cards for Aged Debtors and Aged Creditors, each opening the full report in one click.

## ■ Monthly Reports menu, with its own access control

A new Monthly Reports area groups the Monthly Sales Figures and Sales Commission reports together, behind a single permission so you decide who can see them.

## ■ Collections, price lists and account families

Day-to-day tools to chase money and find the right account.

- Collections worklists keep each rep on their assigned outstanding accounts, with bulk actions.
- A printable price list for quick reference.
- Linked customer accounts: sub-accounts now show their full account family from either side.
- A tool that tidies up Sage credit-note descriptions for cleaner records.

## ■ Downloadable reports & faster navigation

Reports can now be shared and filed easily, and the whole application is quicker to move around.

- Aged Debtors and Sales Rep Exposure download as a polished PDF or an Excel workbook that matches your on-screen filters.
- A command palette (Ctrl/Cmd-K) jumps to any page or report instantly.
- A notifications bell flags anything needing attention from anywhere in the app.
- Report filters are kept in the page link, so a view can be bookmarked or shared, and favourite views can be saved.

## Improvements

IMPROVED

### ■ Balances that reconcile to Sage

Customer and creditor balances are now built directly from Sage's open items, so on-screen totals match Sage to the cent.

- Aging summary tiles on the Customer Balances and Creditor Balances screens that always match the filter applied.
- Location and Terms shown per customer, with a National / Standard account filter.

### ■ Branded, print-ready reports

Every report now prints with your depot name and logo, fits the page cleanly, and reads clearly in black and white, ready to share or file.

### ■ Clearer navigation and tidier screens

Menus were reorganised into logical groups, the sidebar was tidied into an account menu, and explanatory tooltips were added across the new modules.

- Pagination now includes first/last page jumps and a go-to-page box for long lists.
- Summary tables support resizable columns and tidier layouts.
- Page headings share a single consistent style across the application.

### ■ Faster, smoother performance

Reports and dashboards load noticeably faster, show tidy loading placeholders instead of blank screens, and offer a one-click retry if something fails to load.

- A dedicated frontend performance pass and several database query optimisations.
- Configurable data sync: administrators can tune how supplier data is retrieved and how much history is loaded.

## Fixes & Reliability

FIXED

### ■ Accurate local timestamps

Recorded dates and times now consistently reflect local (UTC+2) time across the application, enforced centrally so it cannot drift back.

### ■ Problems are surfaced, not hidden

Issues that previously went unreported are now raised clearly, with system-log telemetry across modules, so they can be resolved sooner.

- Several boot and runtime errors exposed when switching between single-site and head-office views were resolved.

■ **Commission report accuracy**

The printed commission report now includes dedicated Unpaid Invoices and Clawback pages; clawback no longer treats returns or credit notes as a credit to the rep, and the commission-at-risk total adds up correctly.

■ **Cleaner, correct report figures**

Balance, payment and aging figures were corrected across a number of reports and screens so the headline and the detail always agree.

- The customer pop-up shows only genuinely outstanding invoices and receipts; anything paid or matched off is no longer listed.
- Customers who have not traded in a long time are flagged dormant even at a zero balance.
- Corrected aging dates and bucket totals across the debtor and creditor reports, and aligned the dashboard debtor headline with the Customer Balances screen.
