

A focused update to financial reporting: your debtors and creditors now age exactly the way Sage does, balances reconcile to Sage to the cent, and there is a new Monthly Sales Figures report — together with a refreshed, branded look when reports are printed.

New Features

NEW

■ Aged Creditors report

See what you owe your suppliers, aged the way Sage does — Current, 1–30, 31–60, 61–90 and Over 90 days — with each document placed in the correct period. Reconciles to Sage and downloads as a polished PDF or Excel workbook.

■ Monthly Sales Figures report

A month-by-month view of invoices, credit notes and debit notes with VAT shown separately, matching your Sage “Sales Figures” report to the cent. At head office it can be viewed per branch and consolidated across the group.

■ Monthly Reports menu

A new Monthly Reports area groups the Monthly Sales Figures and Sales Commission reports together, with its own access control so you decide who can see them.

Improvements

IMPROVED

■ Balances that reconcile to Sage

Customer and creditor balances are now built directly from Sage’s open items, so the totals on screen match Sage to the cent rather than a balance that could drift over time.

■ Aging at a glance

The Customer Balances and Creditor Balances screens now show aging summary tiles that always match whatever filter you have applied.

■ Reporting dashboard

A new Aged Creditors summary card sits alongside Aged Debtors (showing suppliers you actually pay), and the debtor headline now matches the Customer Balances screen.

■ Branded, print-ready reports

Every report now prints with your depot name and logo, fits the page cleanly, and reads clearly in black and white — ready to share or file.

■ A more consistent look

Page headings across the application now share a single, consistent style.

Fixes

FIXED

■ Cleaner customer view

The customer pop-up now shows only genuinely outstanding invoices and receipts — anything already paid or matched off no longer clutters the view.

- **Dormant accounts flagged correctly**

Customers who have not traded in a long time are now flagged as dormant even when their balance is zero.

- **Report figures that agree**

Corrected aging dates and bucket totals across the debtor and creditor reports, so the headline figure and the detail beneath it always add up.
