

This update introduces the Invoice Profit report — a new view of your trading performance that shows the cost price, selling price, and gross profit on every invoice, grouped by day, week, or month. Drill into any period to see the contributing invoices line by line, export the result as a PDF, and — at head office — compare profitability across branches in a single view. Every figure is drawn from, and reconciles to, Sage.

New Features

NEW

■ Invoice Profit report

A new report shows the cost price, selling price, and gross profit for every invoice, grouped into daily, weekly, or monthly periods. Spot your most and least profitable trading periods at a glance, and drill into any row to see the individual invoices behind the figures.

■ Invoice line drill-down and export (branch)

On a branch, open any period in the Invoice Profit report to see the individual invoices behind the figure. Export the full date range as a formatted PDF summary (month, week, and day totals) for filing or sharing; detailed per-invoice data is available as an Excel workbook. Both exports are available on branch installs only.

■ Invoice Profit at head office — branch comparison

Head-office users can view Invoice Profit across all branches in one screen, with Day, Week, Month, and Year totals and a branch drill-down to compare profitability site by site.

Improvements

IMPROVED

■ Branch: profit summary strip and filters

On a branch, the Invoice Profit report opens with a summary strip that adapts to the selected date range. For a single-month view the strip shows day-to-date, week-to-date, month-to-date, and range total; across multiple months it shows range total, best month, weakest month, and monthly average. A date-range picker and profit filters let you narrow the figures, and the selection is encoded in the page link for bookmarking and sharing. At head office, a period selector switches between Day, Week, Month, and Year groupings, and a branch selector narrows the view to a single site.

■ Hub: sync freshness indicator

At head office, the Invoice Profit page shows the oldest branch-to-hub sync time as a headline so you can tell at a glance how current the consolidated figures are. When one or more branches have not synced in over two hours, those branches are named individually with their last sync time.
