

This update brings new sales-commission reporting, stock expiry tracking and inventory movement insights, along with a number of usability improvements and performance gains across the application.

New Features

NEW

■ Sales commission reporting

Generate monthly sales-commission reports that mirror your existing spreadsheet, drawn directly from Sage. Reports are archived automatically each month and bundled per site as PDFs for easy distribution.

■ Stock receipt expiry tracking

Capture expiry dates against stock as it is received, kept in step with your Sage purchase orders — so you can stay ahead of short-dated and expiring stock.

■ Inventory movement insights

New views show how quickly stock is selling, highlight dead stock, and roll figures up across sites for a group-wide picture.

■ Linked customer accounts

Customers that belong to the same account family are now shown together, so related sub-accounts are easy to find from either side.

■ Credit note corrections

A new tool tidies up credit-note descriptions for cleaner, more consistent records.

■ Collections worklists & price lists

New collections worklists help prioritise outstanding accounts, with an accompanying price list for quick reference.

Improvements

IMPROVED

■ Helpful tooltips

Explanatory tooltips have been added throughout the newer modules to make features more discoverable.

■ Easier navigation of large lists

Pagination now includes first/last page jumps and a go-to-page box, making long lists quicker to move through.

■ Smarter inventory filtering

A new toggle filters inventory to items priced at or below cost, helping you spot margin issues at a glance.

■ Faster performance

Reconciliation and status screens load noticeably faster, and overall responsiveness has been improved through page-load optimisations.

Fixes

FIXED

- **More reliable error reporting**

Issues that previously went unreported are now surfaced clearly, so problems can be spotted and resolved sooner.

- **Report bundle consistency**

Corrected file naming and layout when exporting report bundles, preventing duplicate or mislabelled files.
